

TIPS ON USING BRAND X

- ❖ Spray plant until spray begins to run off the leaves, then just let it dry.
- ❖ No need to wipe the foliage down.
- ❖ Brand X is VERY slippery, so protect any floors under your plants when applying.
- ❖ Do not use on "fuzzy" leaf plants (ie African Violets).
- ❖ When spraying for pests be sure to spray where pests are hiding.
- ❖ When spraying on Ficus the recommend dosage is 3-4 oz/gallon.
- ❖ Generally make sure the soil is damp before spraying anything on your plant.
- ❖ Ficus may drop a few leaves after spraying.
- ❖ Do NOT apply were the sun will shine on any wet leaves.
- ❖ Brand X does not poison pests, it just dries them up almost immediately.
- ❖ Brand X is not toxic to humans or pets.
- ❖ It is suggested that you do not spray over a body of water with fish.
- ❖ Brand X as well as cleaning and polishing your plants will also help repel dust.
- ❖ Brand X falling in the soil of any plant will not harm that plant.
- ❖ One pint of the concentrate will mix up to about 3 gallons of finished spray.
- ❖ If you are mixing up just a quart bottle put 1 – 1.5 oz of Brand X in, then add water. (slightly less for a Ficus...3/4 – 1 oz.)
- ❖ The concentrate can be stored in a cool location for future use.
